■_Energ

Through a clever mix of performance and technology, Energ is **designed to improve the efficiency and quality of painting operations.**

One of Energ's main strengths is its **unique speed control system.** Equipped with high-performance inverters, this booth enables **precise speed control of the air intake and exhaust motors.**

This feature thus allows the **air speed to be adapted to the specific needs of the current painting phase,** ensuring definite savings and optimal results.

But Energ doesn't stop there. It also integrates a 7" touch screen industrial PC, the **DGTouch One,** a true gem of computer technology. With a completely redesigned graphical interface, the DGTouch One offers user-friendliness similar to that of smartphones and tablets.

Operators can interact with the control panel by simply touching the icons on the screen. It is also fully **customizable and available in 23 languages for user convenience.**

The DGTouch One enables **easy navigation through various configuration parameters and control options.** Operators can adjust temperature, airspeed, painting time, and many other settings with a simple touch of their fingers.

With this small but powerful device, the **ECO STAND-BY** option, users will further enhance the usability of the cab, putting it to rest during downtime to the benefit of the wallet and the environment.

USI Italia's proprietary software, not third-party, allows users to store and replay their preferred application configurations. This means that operators can save optimal settings for different types of paint and quickly recall them when needed, eliminating the need to manually configure these cycles each time.

The **advanced internet connectivity** of the control panel enables remote monitoring and control of filter clogging, as well as the scheduling of standard maintenance routines. All of this results in unparalleled efficiency and excellent overview into the production process's performance.

Our technology, combined with our extensive experience in the refinishing processes, provides an extremely intuitive interaction with the Energ booth, minimizing human errors and **simplifying the learning process for new operators** who will start using the equipment.

In conclusion, Energ is more than just a spray booth: it offers **superior performance** and technological advantages (such as **hot flash-offs,** which are extremely useful for paint flash-offs) that elevate the painting process to a higher level.

Available in 3 different length sizes (70/80/90), 3 different internal heights (28/32/34), and 3 different motorizations (normal/super/extra), Energ can be **configured to also meet EN 16985 standards.** If you are looking for a reliable, efficient product at a competitive price, Energ is the right choice for you.

Energ. Energy when you need it.
Now it's up to you to decide when it's time to save it.
